

1B

**BEE BEEAUTIFUL,
BEE HEALTHY.**

“ Mira, las abejas prefieren más la lavanda que otras flores. ”

One day at the park, the girls found a dying bee on the ground and immediately began asking questions: "Why is this bee alone?" "Where is the hive?" "Did she sting anyone?" Their curiosity led to a classroom provocation with different honey products, where they explored, observed, and shared ideas. Wearing expert badges, they grouped their questions about bees' physical characteristics, honey production, communication through movement, and life inside the hive. As final products, they created honey-based products for human well-being.

As they investigated, the girls tested ideas, created drawings and models, and reflected on the importance of bees in nature. Beyond learning facts, they practiced empathy, teamwork, and respect for living things, understanding that even a small bee can inspire meaningful learning.

Teacher's reflection

Through this inquiry, the girls developed observation, critical thinking, creativity, communication, and collaboration skills. The project started with a real experience in the park, where the girls observed a dying bee and asked meaningful questions that guided the investigation. The girls understood that bees are important living beings that work together in organized communities. They also showed empathy and reflected on how humans can help protect nature.

It was surprising to see the depth of their questions, such as: "How can the bees be so organized?" (Adelaida) or "How can something so small be so important?" (Amira), and how engaged they became while exploring honey products, sharing theories, and acting as "experts" during the inquiry process. They really enjoyed activities like the pollination simulation, the hive role-play, and making honey-based products such as cough caramels, lip balms, and hand lotions.

Student's voices

"Así es como las abejas se unen de polen y lo llevan a otras flores"

"The bees are beautiful and important"

"La miel es medicinal, las abejas nos ayudan a estar saludables."

"Las abejas viven pocos días y trabajan mucho para darnos un poquito de su miel"

"Bees are organized"

The girls discovered that even the smallest living beings can make a big difference in the world, reminding us that curiosity, teamwork, and care for nature help communities grow and thrive together.
